Our ref.: 0503-A30092-USf/Jonah/Steve/Nelson

What Is Claimed Is:

A system of automated sorter operation for held or 1 banked wafer lots, comprising: 2 a storage device capable of storing a plurality of process 3 records, each process record corresponding to a wafer 4 lot and comprising an identity and a current status 5 indicating if the wafer lot is on hold, in a 6 production or in a non-production bank; and 7 a sorting module receiving a wafer lot identity, acquiring 8 the current status corresponding to the wafer lot 9 identity from the process record, issuing a first 10 status setting instruction corresponding to the 11 current status to a manufacturing execution system 12 (MES) to release the wafer lot, issuing a flow 13 instruction with sorting recipes directing the MES 14 to perform a sorter operation, and issuing a second 15

status setting instruction corresponding to the

current status to the MES to hold or bank the wafer

lot.

16

17

18

- 1 2. The system of claim 1 wherein the sorting module
- 2 stores the current status into a temporary file or table, issues
- 3 the second status setting instruction corresponding to the
- 4 current status in the temporary file or table, and removes the
- 5 temporary file or table after the sorter operation.
- The system of claim 1 wherein the wafer lot identity
- is input by an operator or a computer system.
- 1 4. The system of claim 1 wherein the MES releases or
- 2 holds/banks the wafer lot based on the first status setting
- 3 instruction or the second status setting instruction
- 4 respectively.
- 5. The system of claim 1 further comprising a wafer
- 2 sorter performing sorter operations according to sorting
- 3 recipes.
- The system of claim 5 further comprising a transport
- 2 system transporting the wafer lot to the wafer sorter.
- 7. The system of claim 6 wherein the MES applies a tool
- 2 dispatch rule to determine the wafer sorter starts the transport

- 3 system and the wafer sorter to perform the sorter operation using
- 4 automated instructions.
- 1 8. The system of claim 1 wherein the sorter operation is
- 2 slot mapping, carrier exchange, wafer lot combination or splits.
- 9. A method of automated sorter operation for held or
- 2 banked wafer lots, the method comprising using a computer to
- 3 perform the steps of:
- 4 receiving a wafer lot identity;
- 5 acquiring the current status corresponding to the wafer lot
- ϵ identity from a process record, wherein the process
- 7 record corresponding to a wafer lot comprises the
- identity and the current status indicating if the
- 9 wafer lot is on hold, in a production or in a
- non-production bank;
- issuing a first status setting instruction corresponding
- to the current status to a manufacturing execution
- system (MES) to release the wafer lot;
- 14 issuing a flow instruction with sorting recipes to direct
- the MES to perform a sorter operation; and

Our ref.: 0503-A30092-USf/Jonah/Steve/Nelson

- 16 issuing a second status setting instruction corresponding
- 17 to the current status to the MES to hold or bank the
- wafer lot.
 - 1 10. The method as claimed in Claim 9 further comprising
 - 2 the steps of:
 - 3 storing the current status into a temporary file or table;
 - issuing the second status setting instruction
 - 5 corresponding to the current status in the temporary
 - file or table; and
 - 7 removing the temporary file or table.
 - 1 11. The method as claimed in Claim 9 wherein the wafer lot
 - identity is input by an operator or a computer system.
 - 1 12. The method of claim 9 further comprising the steps of:
 - 2 releasing the wafer lot based on the first status setting
 - instruction by the MES; and
 - 4 holding or banking the wafer lot based on the second status
 - setting instruction by the MES.

Our ref.: 0503-A30092-Usf/Jonah/Steve/Nelson

- 1 13. The method of claim 9 further comprising a step of
- 2 performing the sorter operation according to sorting recipes by
- 3 the wafer sorter.
- 1 14. The method of claim 13 further comprising a step of
- 2 transporting the wafer lot to the wafer sorter by the transport
- system.
- 1 15. The method of claim 14 further comprising the steps
- 2 of:
- 3 applying a tool dispatch rule to determine the wafer sorter
- by the MES for the given wafer lot;
- 5 starting the transport system to transport the wafer lot
- to the wafer sorter by the MES using automated
- instructions; and
- starting the wafer sorter to perform the sorter operation
- by the MES using automated instructions.
- 1 16. The method of claim 9 wherein the sorter operation is
- 2 slot mapping, carrier exchange, wafer lot combination or splits.

17. A storage medium for storing a computer program which 3 when executed performs a method of automated sorter operation 4 for held or banked wafer lots, the method comprising the steps 5 6 of: receiving a wafer lot identity; acquiring the current status corresponding to the wafer lot ٤ identity from a process record, wherein the process Ģ record corresponding to a wafer lot comprises the 10 identity and the current status indicating if the 11 wafer lot is on hold, in a production or in a 12 non-production bank; 13 issuing a first status setting instruction corresponding 14 to the current status to a manufacturing execution 15 system (MES) to release the wafer lot; 16 issuing a flow instruction with sorting recipes to direct 17 the MES to perform a sorter operation; and 18 issuing a second status setting instruction corresponding 1.9 to the current status to the MES to hold or bank the 20

21

wafer lot.

_ _ _ ...

- 1 18. The storage medium of claim 17, wherein the method
- 2 further comprises the steps of:
- storing the current status into a temporary file or table;
- 4 issuing the second status setting instruction
- 5 corresponding to the current status in the temporary
- file or table; and
- 7 removing the temporary file or table.
- 1 19. The storage medium of claim 17 wherein the wafer lot
- 2 identity is input by an operator or a computer system.
- 1 20. The storage medium of claim 17 further comprising the
- 2 steps of:
- 3 releasing the wafer lot based on the first status setting
- 4 instruction by the MES; and
- 5 holding or banking the wafer lot based on the second status
- 6 setting instruction by the MES.
- 1 21. The storage medium of claim 17, wherein the method
- 2 further comprises a step of performing the sorter operation
- 3 according to sorting recipes by the wafer sorter.

- 22. The storage medium of claim 21, wherein the method 1
- further comprises a step of transporting the wafer lot to the 2
- wafer sorter by the transport system. 3
- The storage medium of claim 22, wherein the method 1
- further comprises the steps of:
- applying a tool dispatch rule to determine the wafer sorter 3
- for the given wafer lot by the MES; 4
- starting the transport system to transport the wafer lot 5
- to the wafer sorter by the MES using automated 5
- instructions; and
- starting the wafer sorter to perform the sorter operation 8
- by the MES using automated instructions. 9
- 24. The storage medium of claim 17 wherein the sorter 1
- operation is slot mapping, carrier exchange, wafer lot
- combination or splits. 3
